

Durable:
The highly tear-resistant spacer fabric offers long-lasting wearing comfort. Guaranteed very good rub fastness, even against Velcro tape!

Antibacterial:
This antibacterial property is already embedded in the specialised yarn. Wash-resistant, even after more than 50 washes.

Prevents perspiration:
The 3-D knitted spacer fabric creates a gap between the vest and the clothing underneath. Heat and moisture can escape and prevent sweating under the vest.

Prevents odor:
The antibacterial property of the textile (embedded in the fiber) prevents the growth of bacteria leading to bad odors/smells.

Swiss Quality:
Developed and designed in Switzerland. Furthermore, the high-quality 3-D spacer fabric is manufactured in Switzerland.

Lightweight:
To the additional very low total weight of <300g per XL size, the vest offers optimal comfort as it greatly minimizes the effect of chafing.

Weight distribution:
Since the vest is compressible, it can distribute the weight of the protective equipment optimally and sits comfortably even when worn for long periods of time. The weight of your protective equipment feels lighter and neck and back pain is reduced.

Breathable:
Additional air channels and the 3-D spacer fabric create space for air circulation and ensure high degree of comfort - even at high temperatures.
